

True Pianos VST

Many people like to use pianos in their music or even play solo. However, most people have to rely on what the manufacturer gives them. Users of OAS7 have an option pack available that gives them better quality pianos and, unlike, other manufacturers, you can try them before you buy.

Before you purchase the option pack, or if you have not yet upgraded to OAS7, download this VST called True Pianos from <http://www.truepianos.com/> which can be run for 40 days as a trial, thus allowing you to directly compare it to the Grand Pianos option pack.

When you do this I am sure you will agree that while the Grand Pianos option pack is good, True Pianos gives a much more realistic sound and, if required, can be edited down to the smallest detail. (The Wersi editing facilities are primitive in comparison)

What makes this even more enticing is the fact that it is not much more expensive than the Grand Pianos option pack. There are sound demos on the True Pianos site. I have uploaded a couple of short pieces, complete with Midi files (so that you can run a direct comparison) for you to have a listen to.

The files are quite large, as I have had to use wav files due to the fact that even when converted to the highest quality possible with mp3, it still lacked the quality of the wav file.

The preset used is the Classic

You can download the demos from this link:

http://www.4shared.com/dir/4009722/4c2d5431/True_Piano.html

Enjoy.

Bill
